

From Blank Canvas to Live Application

The 25-Day Blueprint to Full Stack Development using Python

Led by **Prakash Rawat** | Full Stack Developer & Trainer

The Beautiful Interface is Only Ten Percent of the Story.

When you order food, book a cab, or scroll social media, the app looks effortless. But if only the visual interface existed, no order would ever arrive. The real magic happens behind the screen.

To build real applications, you must master the entire system, not just the surface.

Building a digital application is exactly like building a physical house.

A Full Stack Developer is the master architect who understands how to pour the foundation, wire the logic, and paint the interface.

Companies hire developers who can build, not those who just know syntax.

This 25-day course is engineered exclusively to
turn you into the builder on the right.

You cannot learn to drive by reading the traffic rule book.

Programming requires you to sit in the driver's seat.

Our curriculum enforces a strict **80% practical**, **20% theory** split to ensure daily momentum.

The 80/20 Practical Learning Loop

The 25-Day Digital Blueprint

Day	Theory Topics	Practical/Lab	Assignment/Outcome
1	Flask Framework Introduction, Routing	Web Server Setup	Final Project Development
2	Flask Framework Introduction, Routing	Web Server Setup	Testing & Debugging
3	Flask Construction: Introduction, Authentication, Customization Flask Framework Flask Apps Flask Xpert Flask Framework	Testing & Debugging	Final Project Development

Phase 1: The Foundation
(Days 1-7) - Python & Logic

Phase 2: The Interface
(Days 8-10) - HTML, CSS & JS

Phase 3: The Engine
(Days 11-15) - Flask & SQLite

Phase 4: Advanced Systems
(Days 16-22) - APIs, Auth & Git

Phase 5: The Masterpiece
(Days 23-25) - Capstone & Deployment

Phase 1: Pouring the Python Foundation (Days 1–7)

Phase 2: Constructing the Interface (Days 8–10)

Tech Stack

HTML5 Fundamentals, CSS3 & Bootstrap, JavaScript Basics, DOM Manipulation.

The Build

The Milestone Build:
Interactive Form Validation
& Personal Portfolio.

You will design static structures, make them responsive to any device, and use JavaScript to make elements react instantly to user input.

Metaphor Tracker

Day 10: Walls & Glass
Erected – Structure
Taking Shape,
Interactive Elements
Added, Responsive
Design
Implemented.

Phase 3: Installing the Engine and Vault (Days 11-15)

Tech Stack:

Flask Framework & Routing, Jinja2 Templates, GET/POST Requests, SQLite, SQL Basics.

The Milestone Build: Student Management System (CRUD Application). You will build a multi-page dynamic website that can Create, Read, Update, and Delete records directly from a connected database.

Metaphor Tracker

Day 15: Engine & Vault Installed – Structure Taking Shape, Internal Systems Connected, Functional, Ready for Data.

Phase 4: Wiring the Advanced Systems (Days 16–22)

- **Tech Stack:** User Authentication (Sessions), REST APIs & JSON, Postman, File Uploads, Git & GitHub.
- **The Milestone Build:** Secure API Integration & Login System. You will implement real-world security, handle media uploads, consume REST APIs, and manage your source code professionally using Git.

Metaphor Tracker

Day 22: Advanced Systems Wired – External Connections Made, Security & APIs Integrated, Ready for Real-World Data.

Phase 5: Launching the Masterpiece (Days 23–25)

- **Tech Stack:** Project Architecture, Render / PythonAnywhere, Testing & Debugging, Live Deployment.
- **The Milestone Build:** The Final Capstone Project. You will plan, design, build, test, and deploy a complete Full Stack Project to a live web server, culminating in a professional viva and demonstration.

Metaphor Tracker

Day 25: Masterpiece Launched – Structure Fully Completed, Deployed to Live Server, Real-World Access, Ready for Use. The Final Build.

Your Deployed Portfolio.

By Day 25, you won't just have a certificate. You will have a live, verifiable portfolio of functional systems.

My Commitment to Your Journey.

From Day 1 to Day 25, you will have beginner-friendly guidance, daily doubt solving, and project support until your final line of code is deployed.

	Daily hands-on coding.
	Industry-style project architecture.

	Interview and portfolio guidance.
	Full support from local setup to live deployment.

Welcome to Full Stack Development. Let's start building.
