

FROM CONSUMER TO CREATOR

THE CONSUMER

You order food on Zomato. 🍕

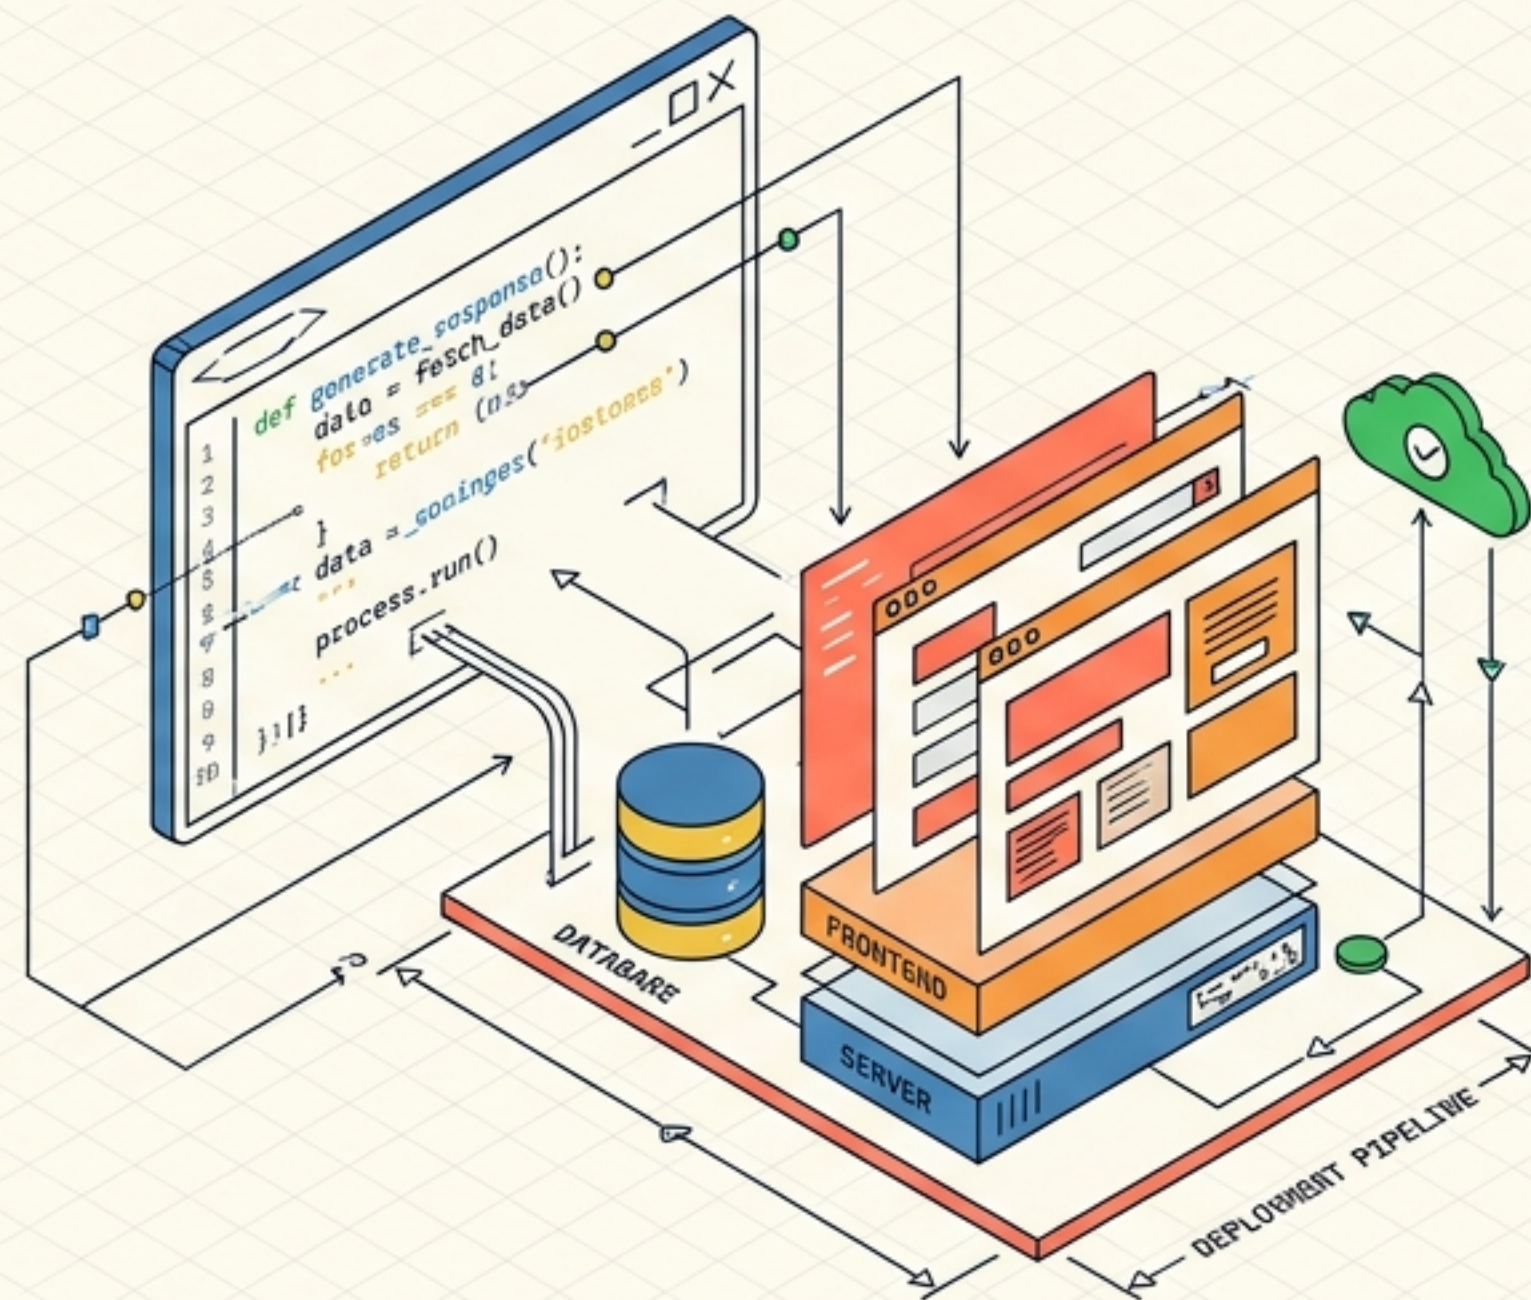

You book cabs on Uber. 🚗

You scroll on Instagram. 📱

WELCOME TO FULL STACK DEVELOPMENT USING PYTHON.

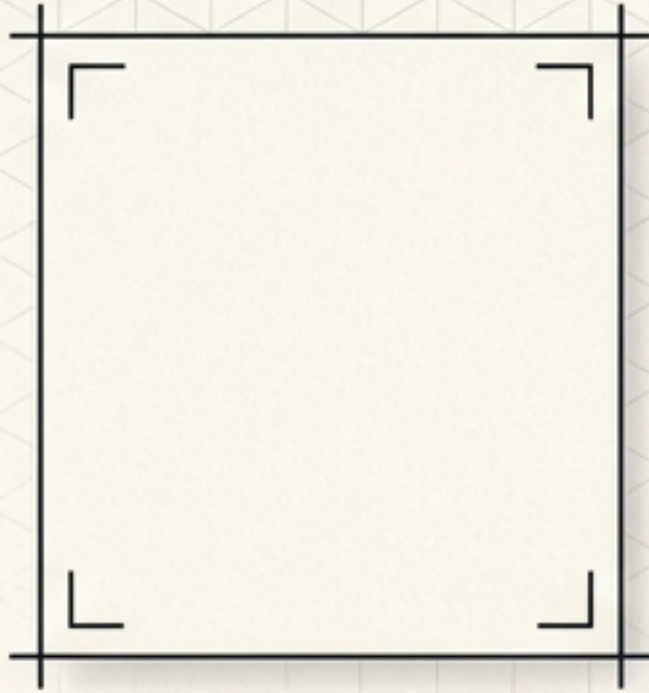

THE CREATOR

By the end of this 25-day journey, you won't just use these systems.

You will know exactly how to build them.

MEET YOUR LEAD ARCHITECT

**PRAKASH RAWAT | FULL
STACK DEVELOPER &
PYTHON TRAINER**

3+

DEVELOPMENT &
TRAINING EXPERIENCE

HANDS-ON

INDUSTRY PROJECTS
OVER PURE THEORY

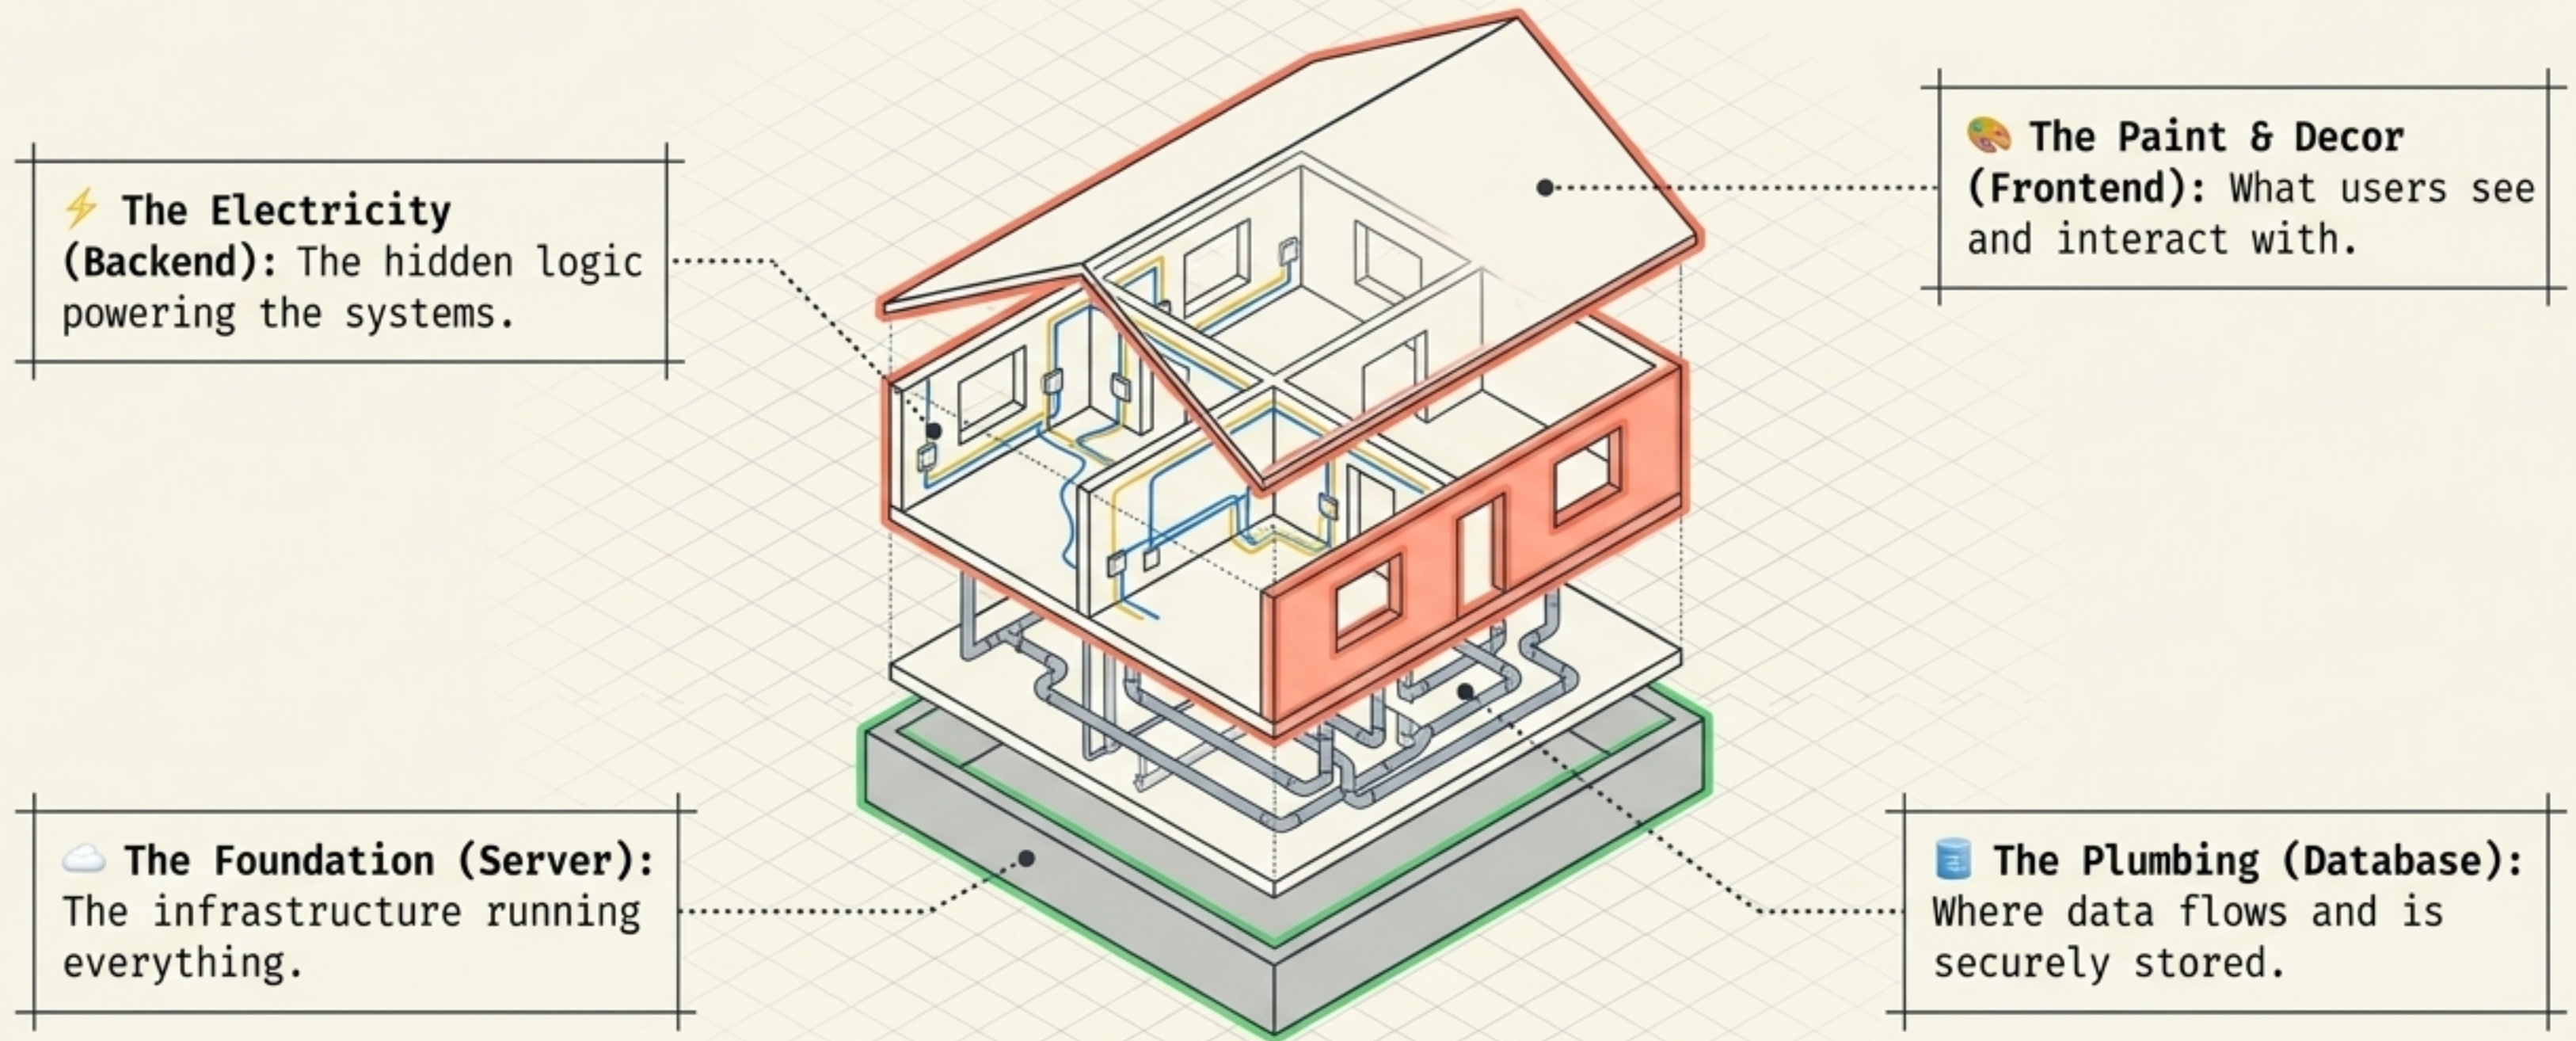

APPROACH

100% PRACTICAL
LEARNING METHOD

**“Today I’ll show you how modern websites are built.
In 25 days, you’ll be the one building them. ”**

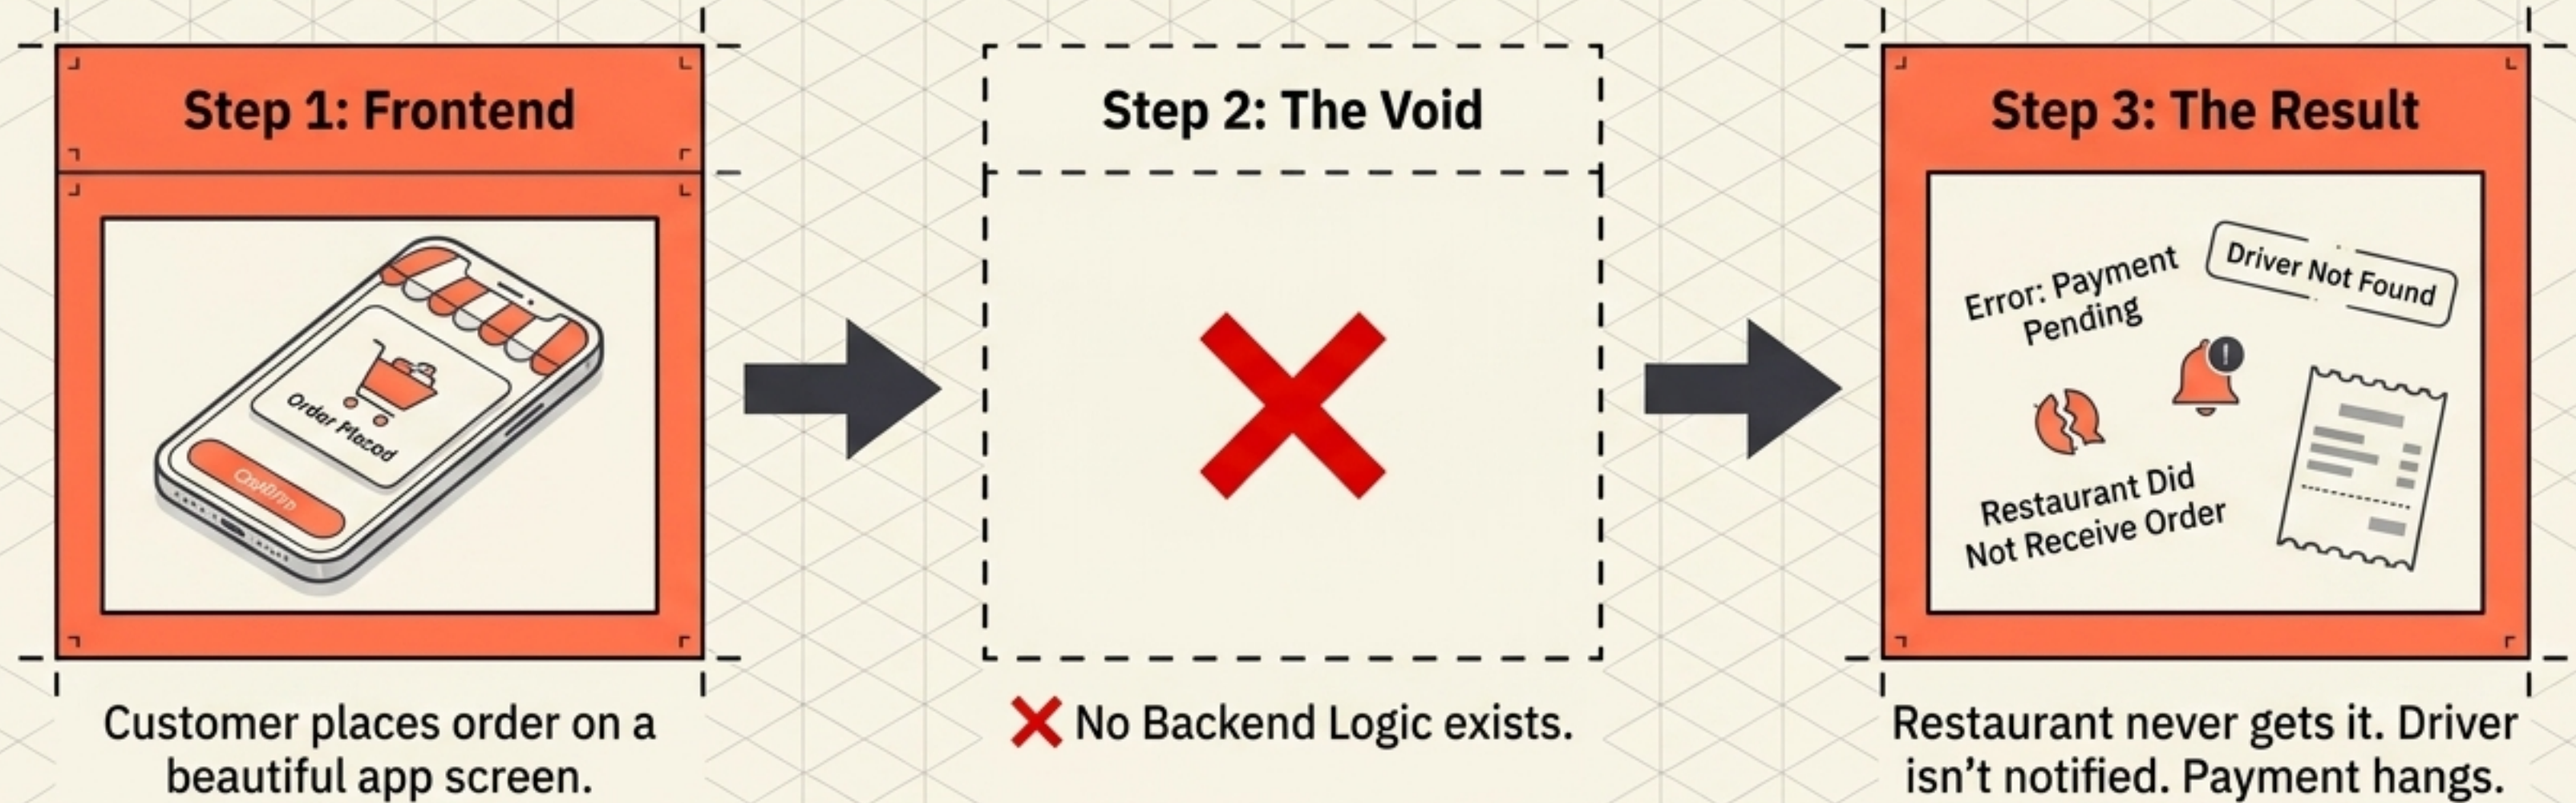

WHAT IS FULL STACK DEVELOPMENT?

A house needs more than beautiful paint to function.

Full Stack Developers build the entire system, not just the interface.

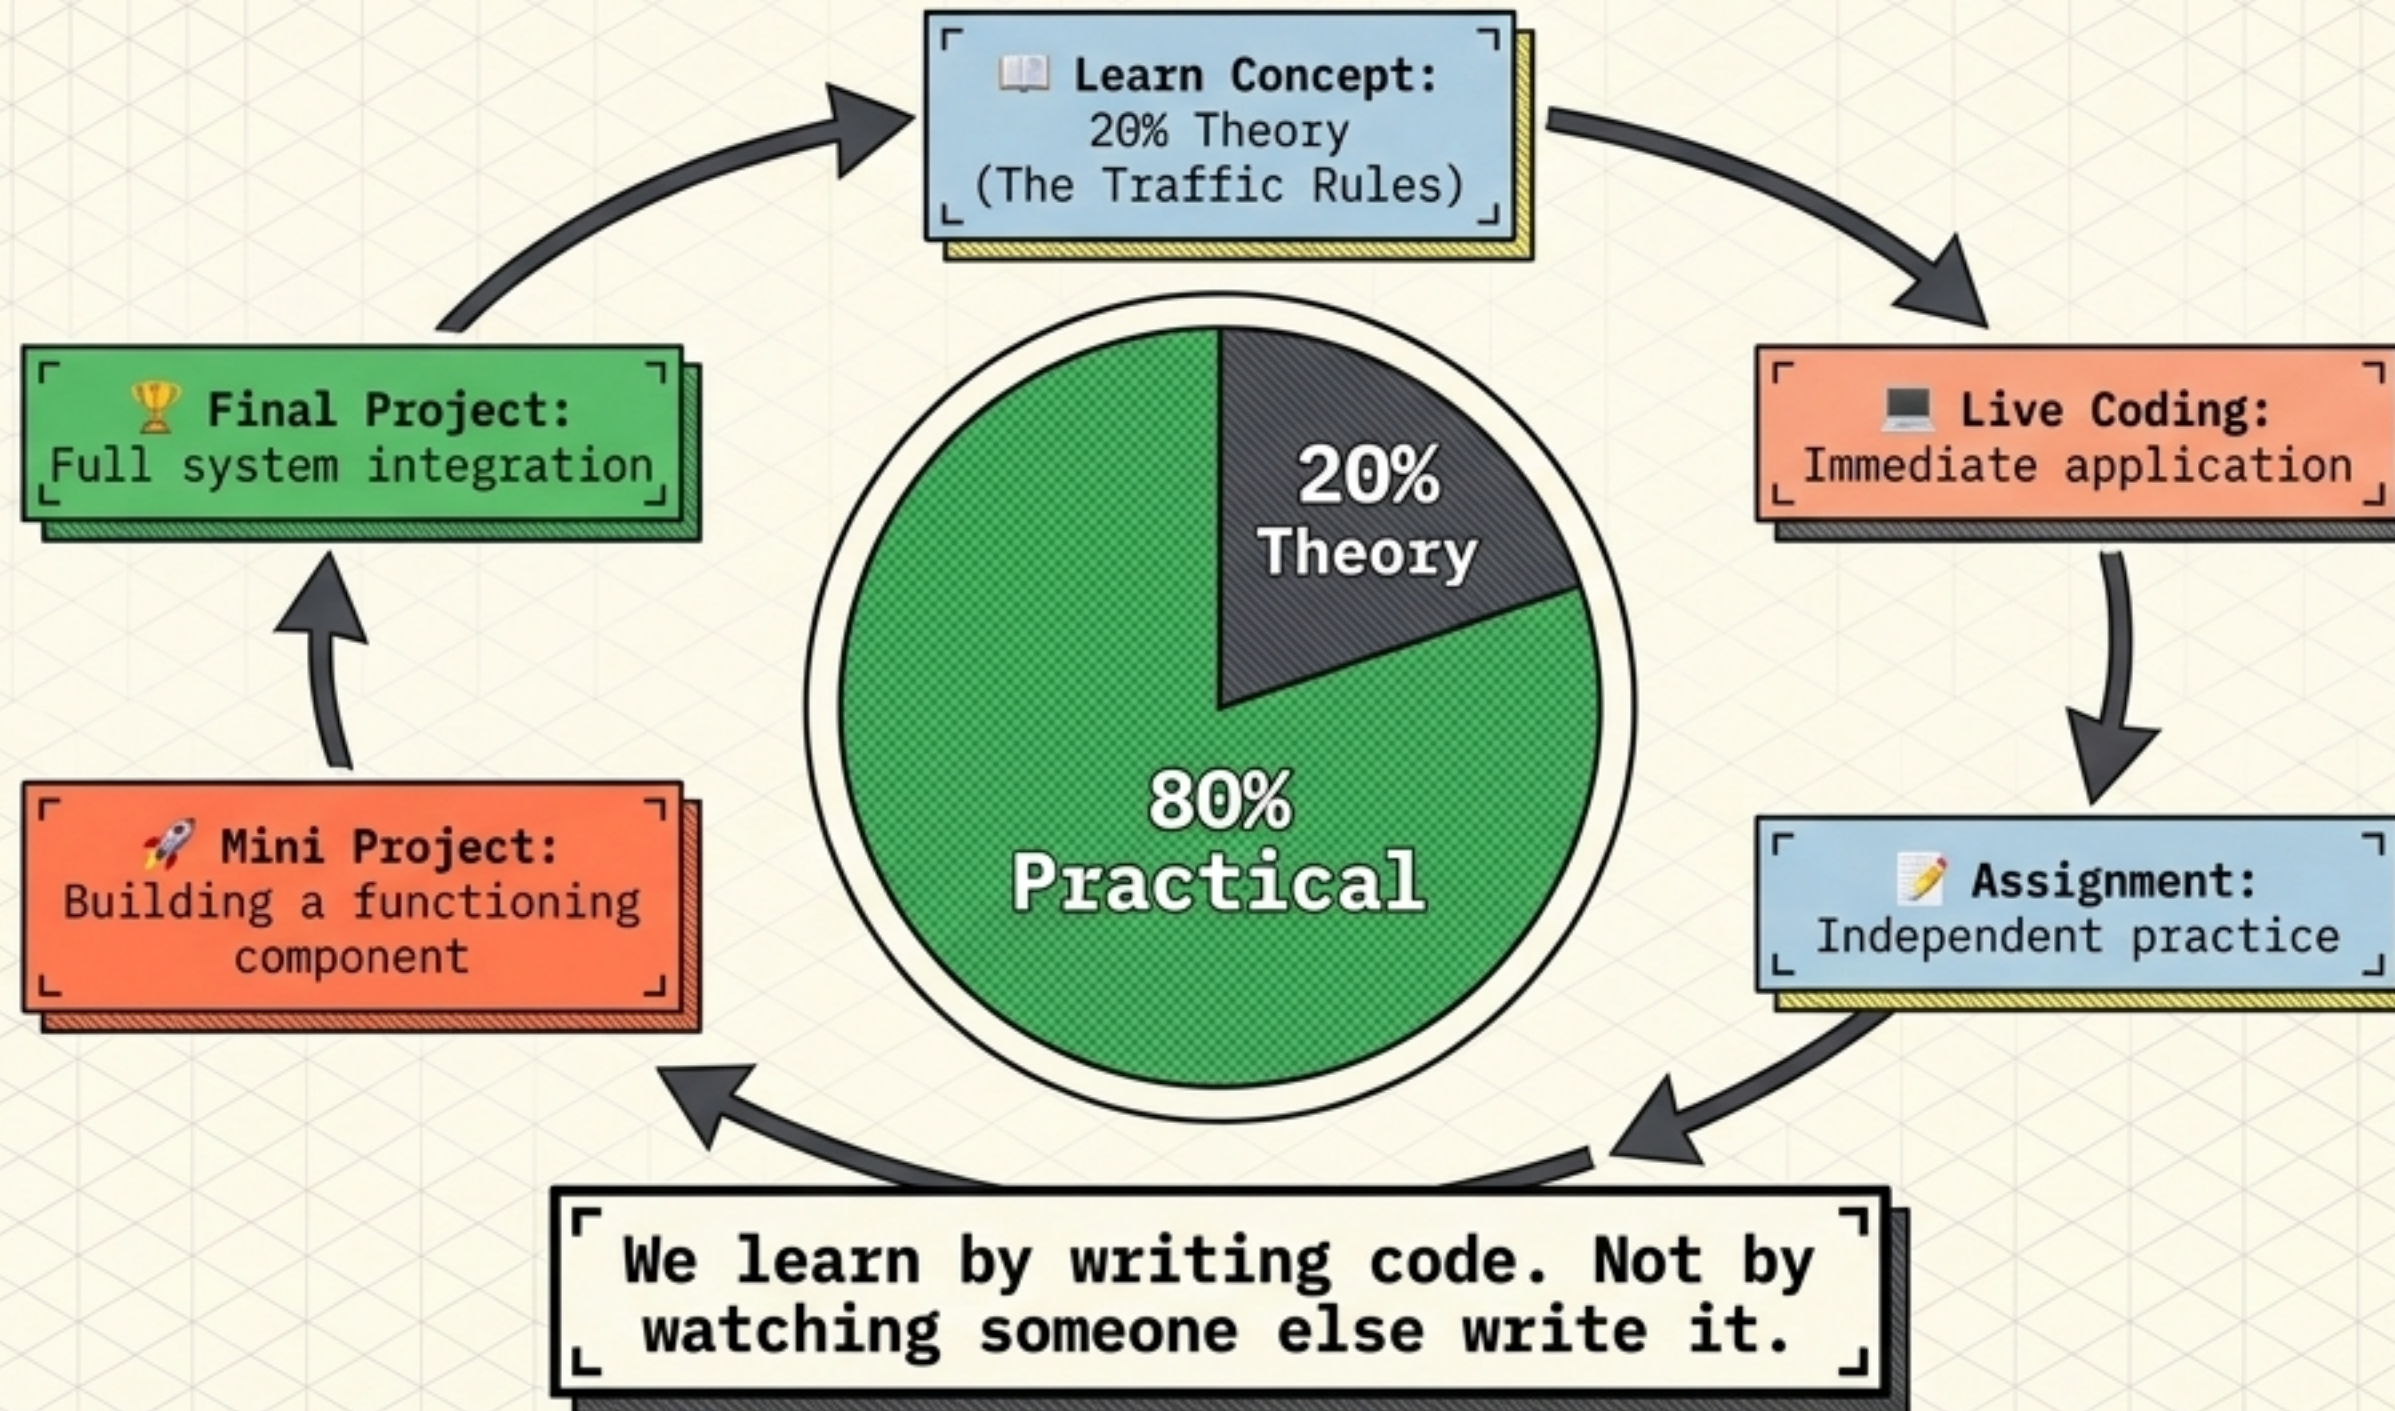

THE SWIGGY DILEMMA: WHY THE BACKEND MATTERS

Without a backend, the order screen looks beautiful... but no food ever arrives. 😂

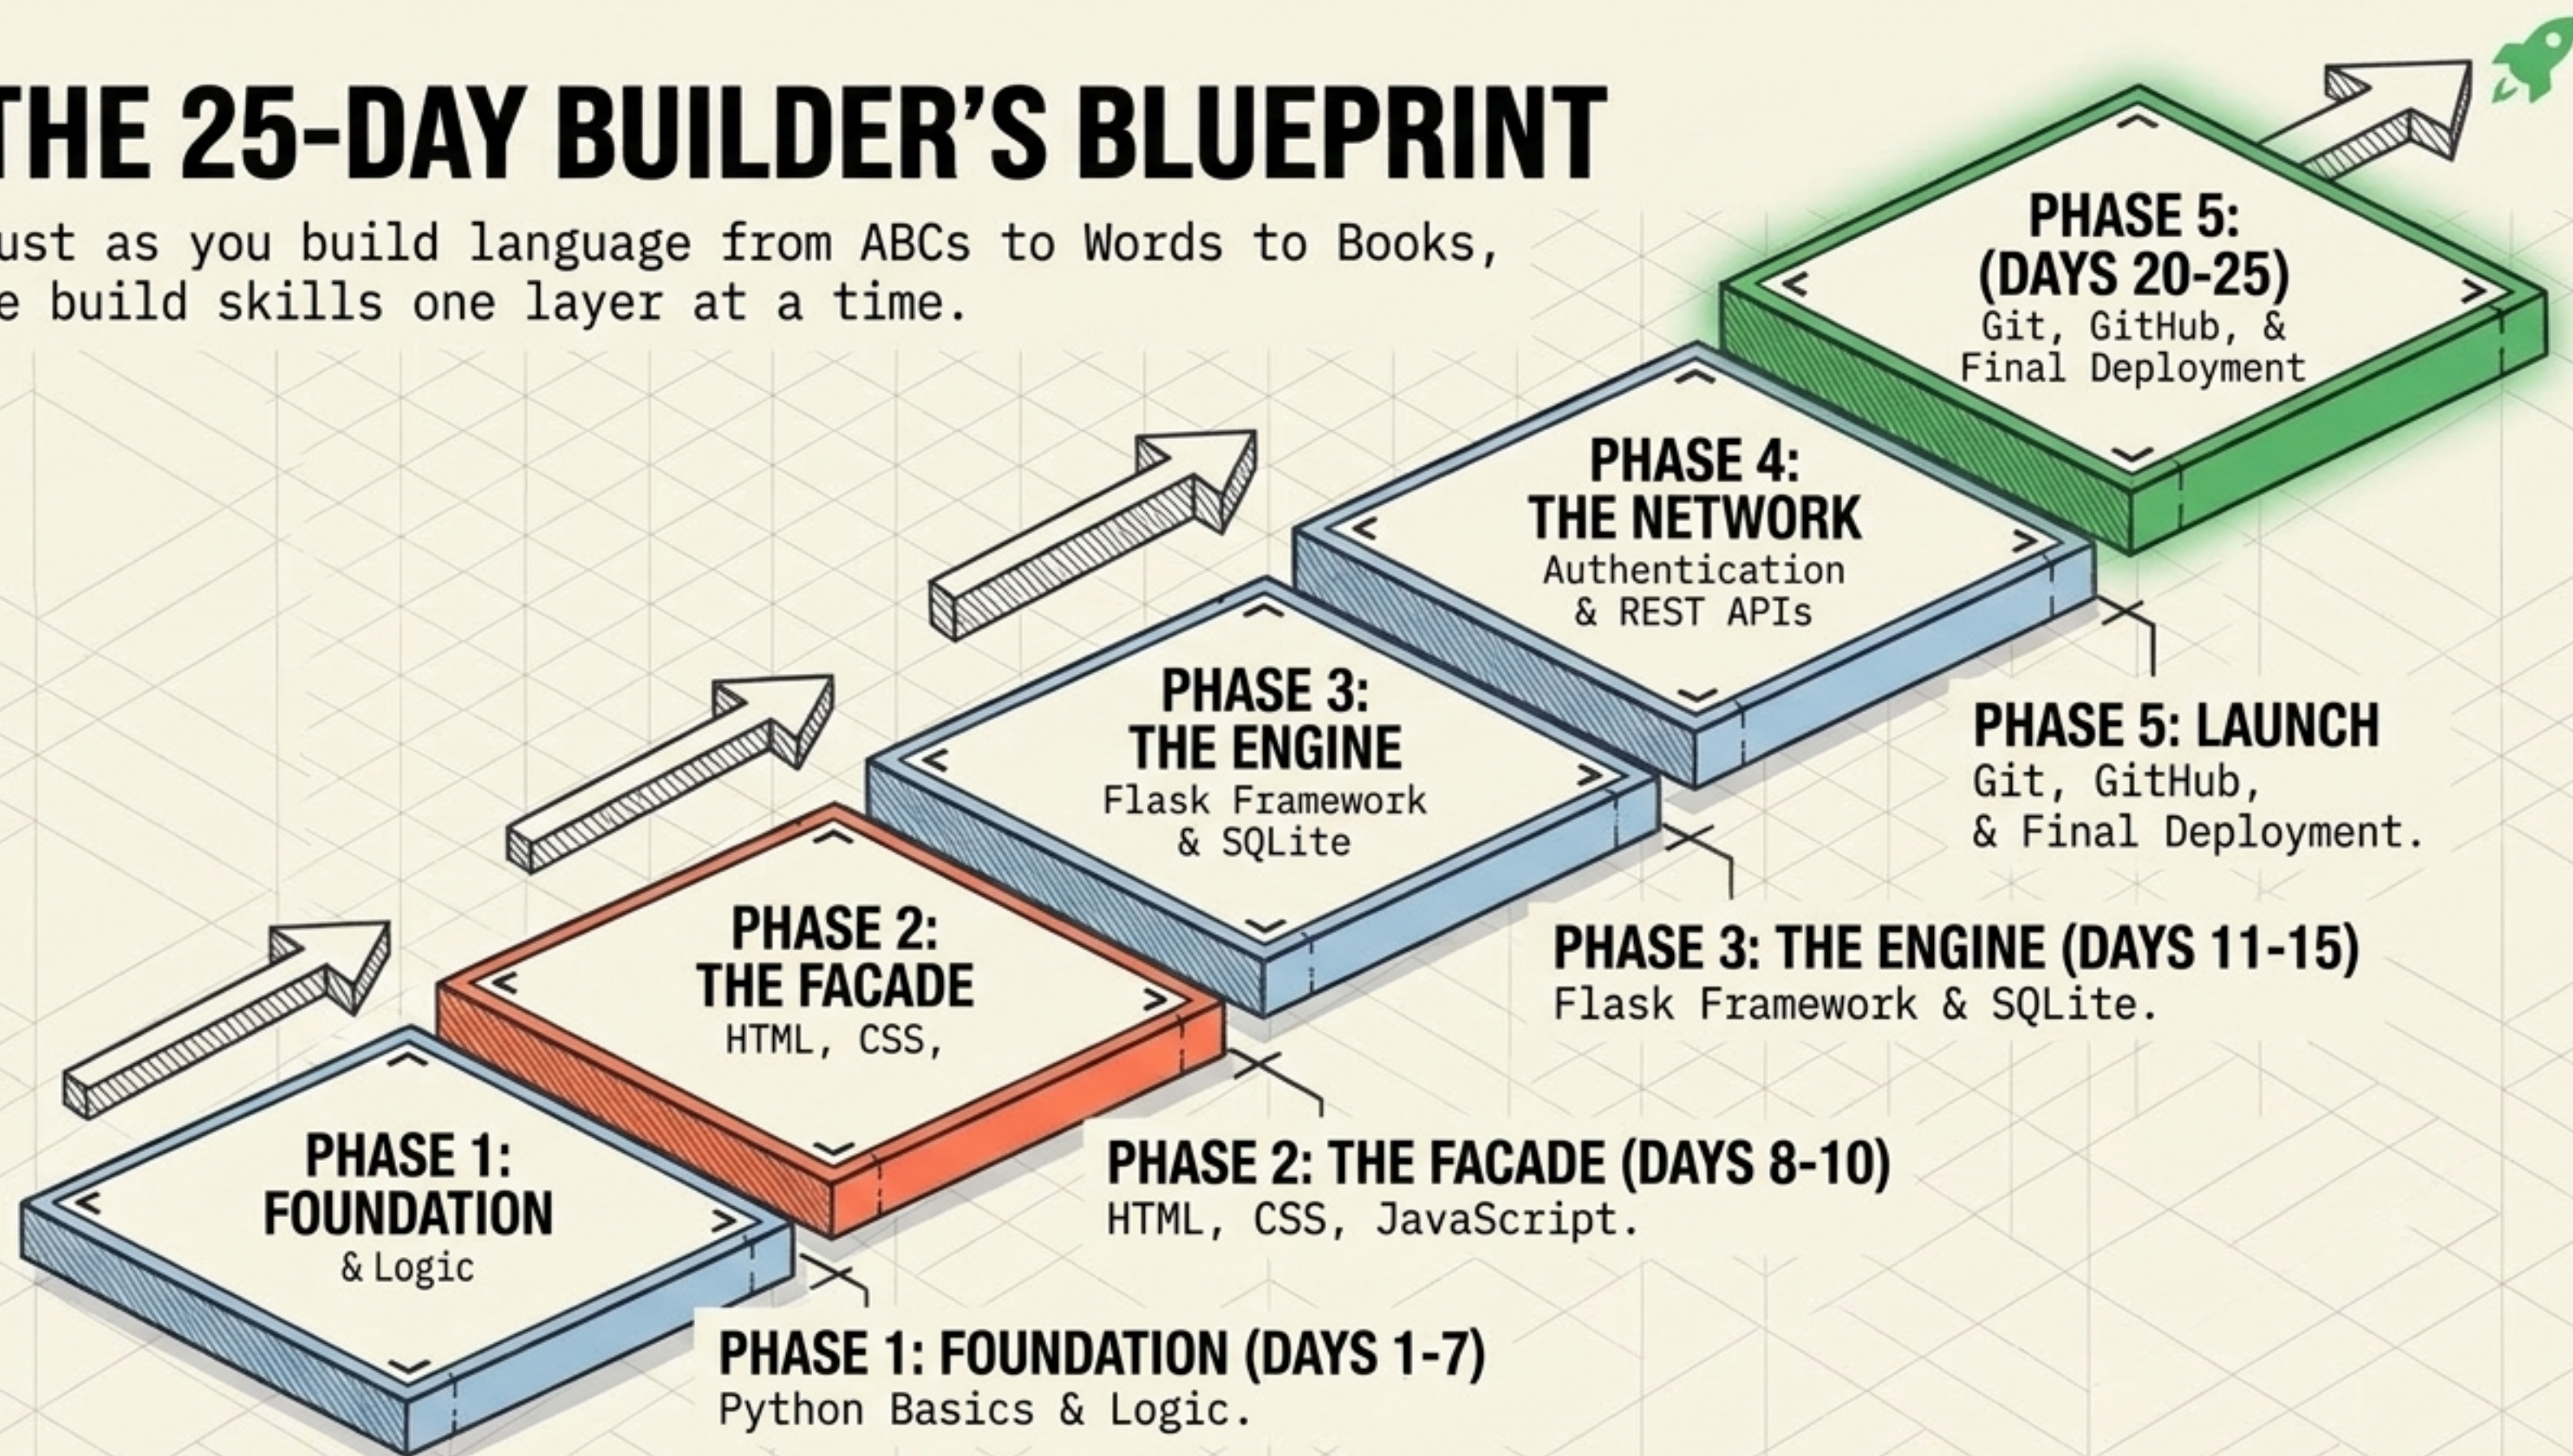

HOW WE LEARN: THE 80/20 RULE

You can't learn to drive by reading the traffic rule book.
You have to sit in the driver's seat.

THE 25-DAY BUILDER'S BLUEPRINT

Just as you build language from ABCs to Words to Books,
we build skills one layer at a time.

Phases 1 & 2: Logic Meets Design

Phase 1: Foundation

Focus: Python & OOP

Outcomes:

- Number guessing logic
- Calculator functions
- Bank Management System via Object-Oriented Programming

Phase 2: The Facade

Focus: HTML/CSS & JS

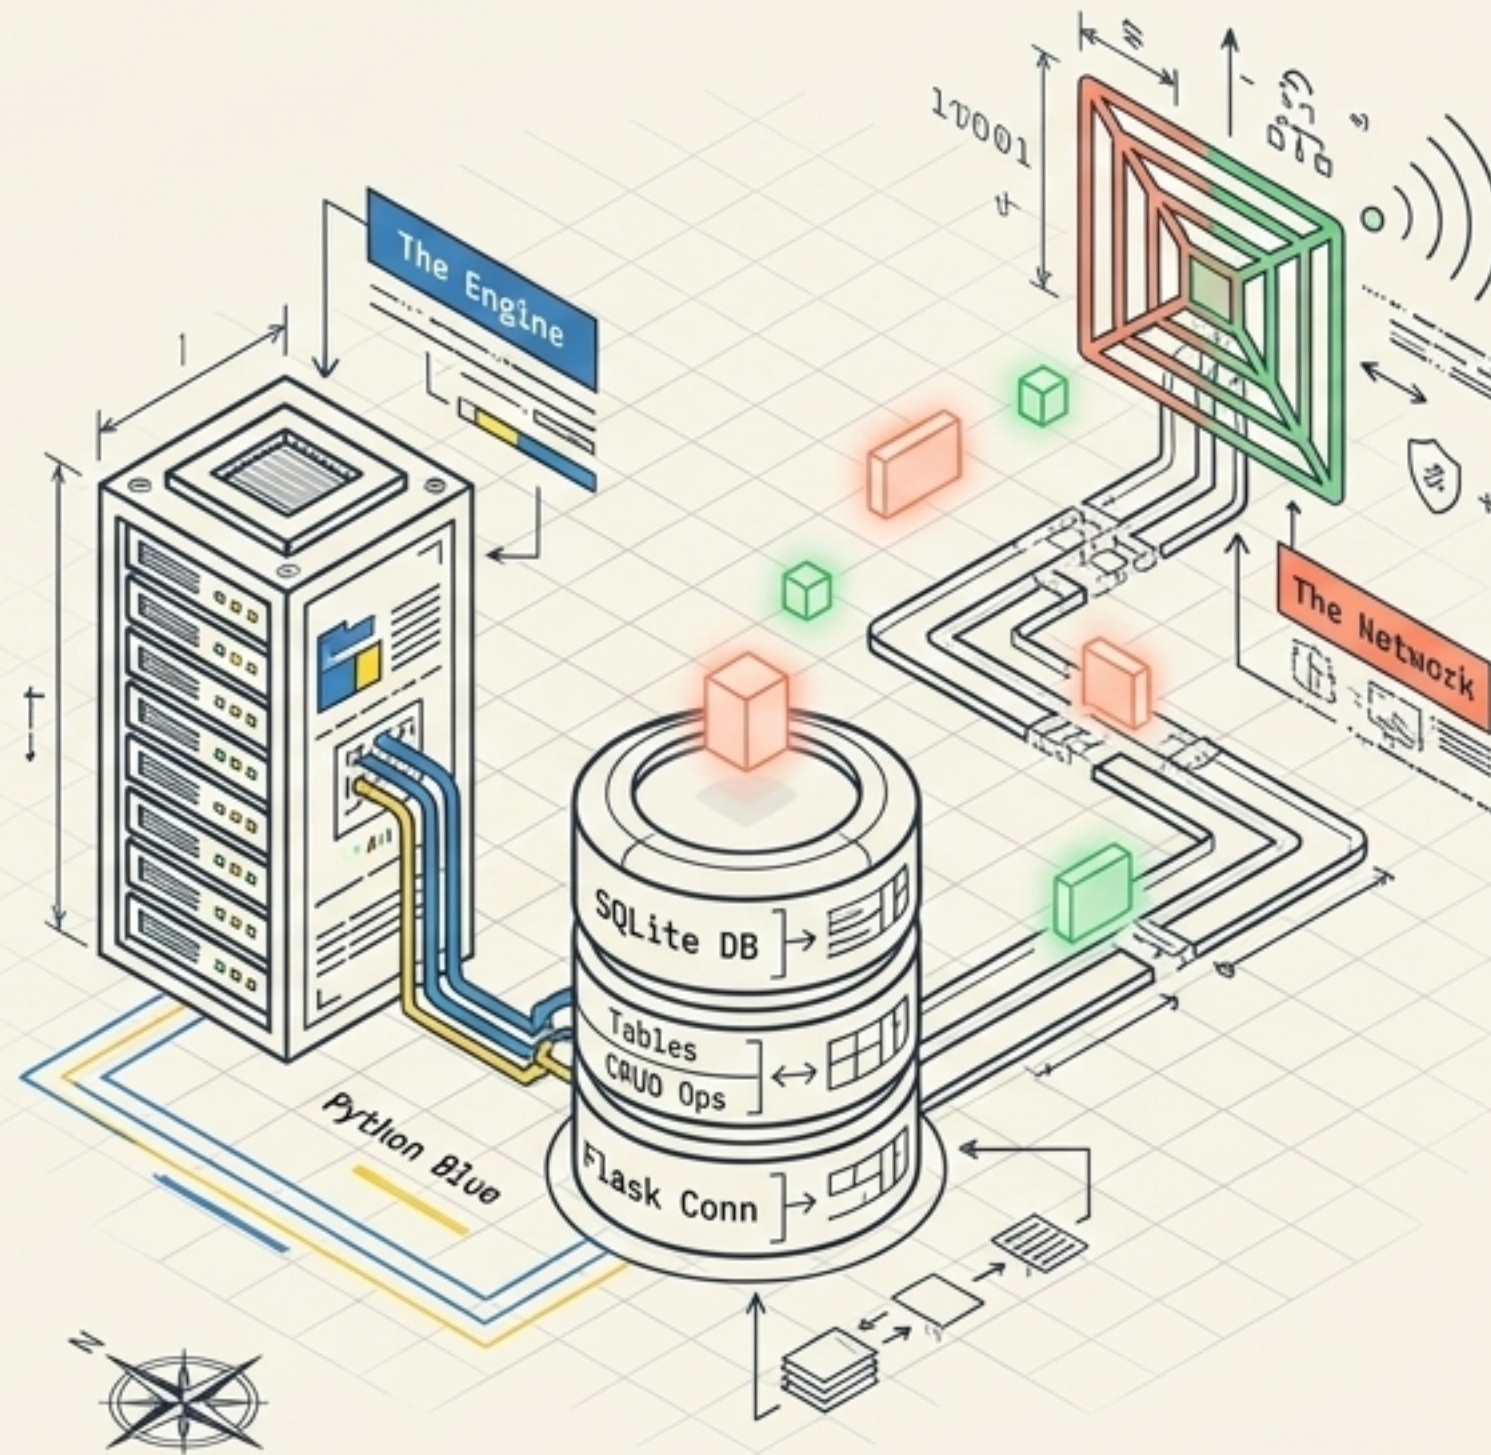

Outcomes:

-  - Personal Portfolio Page
-  - Responsive Bootstrap landing pages
-  - Interactive Form Validation

Phases 3 & 4: Powering the System

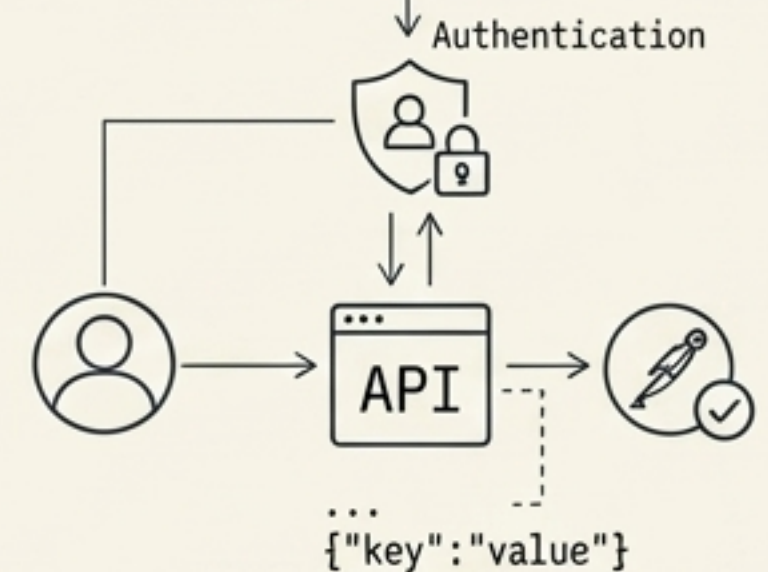

Phase 3: The Engine (Flask & SQLite)

- Building multi-page dynamic websites using Jinja2 templates.
- Handling user data with GET/POST requests.
- Wiring the system to a SQL database for CRUD (Create, Read, Update, Delete) operations.

Phase 4: The Network (Auth & APIs)

- Securing the house: Login, Registration, and Session management.
- Building and consuming REST APIs (JSON) and testing them with Postman.

Phase 5: The Capstone Stack

☁ Days 20-25: Pushed to GitHub and deployed live on Render/PythonAnywhere. You don't just finish a course; you launch a product.

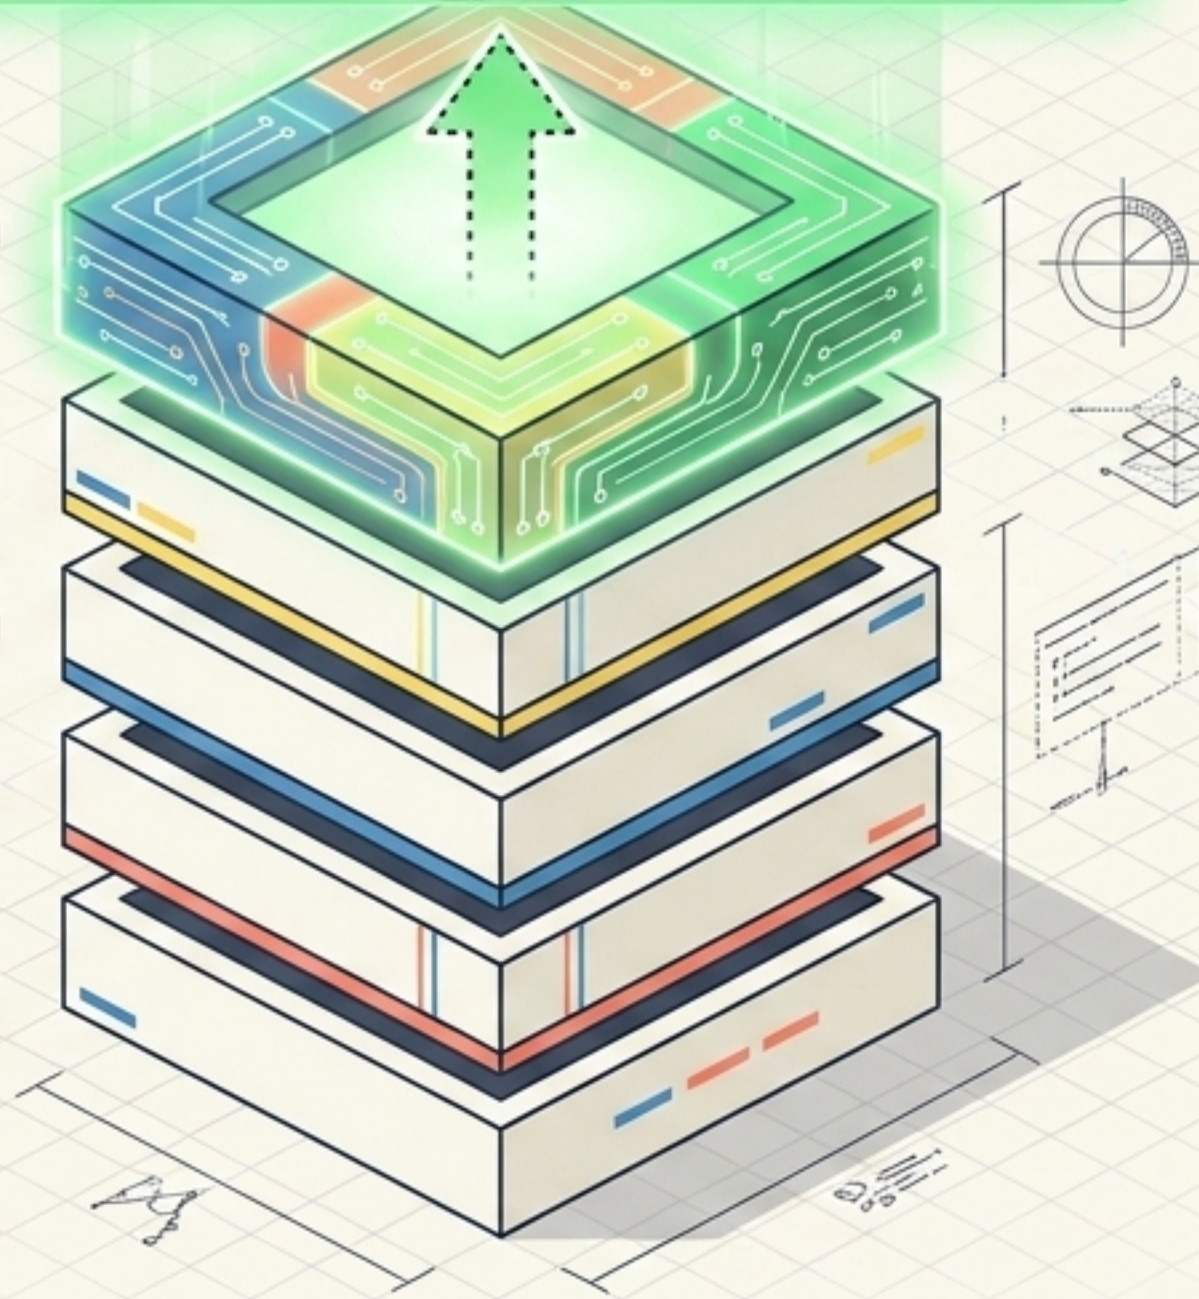

Top Layer:
Student Management System
(The integrated Final Project)

Layer 4: REST API
(JSON/Postman)

Layer 3:
Login & Registration System
(Auth)

Layer 2: CRUD Application
(Flask + SQLite)

Base: Personal Portfolio
Website (HTML/CSS)

The Interview Showdown

Companies hire people who can build. Not people who only know syntax.

Student A (The Theorist)

Resume: → Python Course Completed

Interview Answer: → "Yes Sir, I know Python."

Proof: 0 Live Links

Result: **✗ Rejected**

Student B (The Builder - You)

Resume: → Built & Deployed Full Stack SMS 

Interview Answer: → "Yes Sir, here is my GitHub and live REST API."

Proof: 1 Live Deployed Project, 5 Portfolio pieces. 

Result: **✓ Selected**

The Blueprint Pact

My Promise to You for the Next 25 Days.

Beginner-friendly
teaching (Zero to Hero)

Practical live coding
in every session

Daily assignments &
real-time doubt solving

Industry-standard
project architecture

Dedicated interview &
resume guidance

Full support until your
project is live on the
internet

It's time to build. See you in the driver's seat.
